FIG. 12B

#bit	Field	Description
4	s	State machine state
2	ts_offset	Timestamp offset (0=none, 1=22B from start of TCP header, 2=23B, 3=24B)
1	t_left	TCP header starts in left half of dword
4	Reason	If nonzero, the reason from slow-path processing
1	Msw_pa	Job FIFO MS word parity
1	d_left	1 st dword stored (at next dword write qword to ingress fifo)
64	d_data	Stored dword
2	d_par	Stored dword parity
80		Total bits

FIG. 13A

Slow-Path Reason codes (*=set by dispatcher):

- 0 : nop -- fastpath iSCSI
- 1: ARP frame
- 2: other non-IP (not ARP) frame
- 3: IP fragment (if not, fragment zero could be iSCSI)
- 4: TCP but not iSCSI or runt iSCSI (flen<0x38)
- 5: UDP frame
- 6: ICMP frame
- 7: other IP frame (not IP fragment, TCP, UDP, or ICMP)
- 8: iSCSI, IP fragment zero
- 9: iSCSI, no socket ID found in CAM
- a: iSCSI, unsupported option
- *b: iSCSI, fastpath disabled
- *c: iSCSI, out of sequence
- *d: iSCSI, bad data boundary

FIG. 13B

CAM_LOAD I, data = Write CAM entry I with specified; Set Valid bit;

CAM_READ I = Read data contained in CAM entry I;

CAM_INV I = Clear the valid bit for CAM entry I;

CAM_REQ P = Initiate CAM search with Key elements written in the
CAM-Key register for network port P;

CAM_RESULT P = Fetch result from CAM search for network port P;

FIG. 14

#bit s	Field	Description
2	TS offset	If nonzero, byte offset minus 1 from start to TCP options to timestamp field
4	TCP option length	Size in words of TCP options
4	slow-path Reason Code	If nonzero, packet takes slow path. Reason codes (*=set by dispatcher): 0 : nop -- fastpath iSCSI 1: ARP frame 2: other non-IP (not ARP) frame 3: IP fragment (if not, fragment zero could be iSCSI) 4: TCP but not iSCSI or runt iSCSI (flen<0x38) 5: UDP frame 6: ICMP frame 7: other IP frame (not IP fragment, TCP, UDP, or ICMP) 8: iSCSI, IP fragment zero 9: iSCSI, no socket ID found in CAM a: iSCSI, unsupported option *b: iSCSI, fastpath disabled *c: iSCSI, out of sequence *d: iSCSI, bad data boundary
1	ID valid	iSCSI socket ID valid
1	Init	Initiator mode
4	IP option length	Size in words of IP options
10	Socket ID	iSCSI socket ID
1	VLAN	16 th byte contains Vlan tag (IP frame)
1	802.3	802.3 rfc 1042 coding was removed from ethernet header (IP frame)
14	frame length	Length of formatted frame in bytes
16	partial checksum	Checksum for UDP or partial TCP segment (info PIEman)

FIG. 25

Command	Description
Push	Writes data beginning at write pointer and saves new write pointer in descriptor.
Push/Inc	Writes data beginning at write pointer, increments counter field by one, and saves new write pointer and counter in descriptor
Inc	Increments counter field by a specified amount and saves new counter in descriptor
Inc Bytes	Increments write pointer field by a special amount and saves new write pointer in descriptor
Push/Chkpt	Writes data beginning at write pointer and saves new write pointer in descriptor and in descriptor extension as write checkpoint.
Push/Inc/Chkpt	Writes data beginning at write pointer, increments counter field by one, saves new write pointer and counter in descriptor, and saves new write pointer in descriptor extension as write checkpoint.
Inc/Chkpt	Increments counter field by a specified amount, saves new counter in descriptor, and copies current write pointer to write checkpoint
Rewind	Copies write checkpoint to write pointer and saves result in descriptor
Peek	Reads data beginning at read pointer (for queues) or write pointer (for stacks) but does not save new pointer in descriptor
Pop	Reads data beginning at read pointer (for queues) or write pointer (for stacks) but saves new pointer in descriptor
Pop/Dec	Reads data beginning at read pointer (for queues) or write pointer (for stacks) decrements counter field by one, and saves new pointer in descriptor
Dec	Decrements counter field by a specified amount and saves new counter in descriptor
Dec Bytes	Decrements read pointer (for queues) or write pointer (for stacks) by a specified amount and saves new pointer in descriptor
